EDUCATION

• University of California, San Diego

2022–2026

B.S. Computer Science

WORK EXPERIENCE

• Software Development Engineer Intern

June 2025 – September 2025

Golf District, Remote | SQL, Java, GitHub Actions

- Automated a **CI/CD workflow** with GitHub Actions, regex extraction, and command-line tooling to connect merged pull requests with Jira tickets, eliminating an estimated **10 hours of manual tracking per week**.
- Created and executed multilingual and edge-case test scenarios for an AI-powered booking system, documented intent failures, and validated end-to-end behavior before release.
- Audited and updated **environment-variable documentation**, clarifying configuration requirements and setup steps for more reliable local development and deployment.

PERSONAL PROJECTS

• Phim

Summer 2026 – Present

Android Movie Ranking Application | Kotlin, Jetpack Compose, Firebase

- Built a native Android application in **Kotlin** with Firebase Authentication, Firestore persistence, TMDB REST integration, and movie search, ranking, profile, and social-feed workflows.
- Applied **MVVM** with an activity-scoped ViewModel and StateFlow so selected movies and ranking updates propagated reactively across multiple screens and lifecycle events.
- Separated Firebase and TMDB data access behind repository abstractions, keeping Fragments focused on rendering state while ViewModels coordinated authentication, persistence, search, and ranking workflows.

• Successorator

Spring 2024

Android Task Manager | Java, Room, JUnit, Robolectric

- Collaborated in a **7-person Agile team** to build a Room-backed Java Android task manager with **4 task views** and **4 recurrence intervals** using ViewModel, LiveData, Fragments, and repository-pattern architecture.
- Achieved **93% test coverage** with JUnit and Android instrumentation tests spanning Room persistence, repository logic, UI state, task ordering, and lifecycle behavior.
- Validated insert, delete, reorder, completion, pending, recurring, context-filtering, and scheduled-cleanup workflows with mock DAOs and in-memory Room databases, including the **2 AM rollover boundary**.

• CVDioree

Winter 2026

Backend API Integration | Python, Go, Java, Perl, JavaScript

- Designed and implemented **24 RESTful API endpoints** across Python, Go, Java, and Perl, maintaining consistent request and response behavior across multiple backend runtimes.
- Built a vanilla JavaScript frontend that consumed REST endpoints, handled session state, and executed asynchronous form submissions across full-stack workflows.
- Implemented server-side session management and a telemetry API that ingested and parsed JSON through **navigator.sendBeacon**, maintaining reliable client state across runtimes.

LEADERSHIP & EXPERIENCE

• Association for Computing Machinery

Fall 2024 – Spring 2026

Outreach Workshop Organizer, San Diego

- Organized and led **10+ beginner computing workshops** for hundreds of K–12 students, boosting reported interest in computing by **90%**.

LANGUAGES & TECHNOLOGIES

Languages: Kotlin, Java, JavaScript, Python, SQL, Go, HTML/CSS, C/C++

Technologies: Android, Jetpack Compose, Firebase, JUnit, Robolectric, REST APIs, GitHub Actions, Git, Gradle, Jira, Confluence

Engineering: MVVM, Object-Oriented Programming, StateFlow, Automated Unit and Integration Testing, CI/CD, Agile Development, Code Review, Technical Documentation
